PROBLEM STATEMENTS

Explore and choose a challenge

4 challenges

Read each brief here. Only your team lead can make the final selection.

Challenge 1

AI-Powered Personal Health Copilot

Altrix Labs

Challenge 2

AI Content Creator Marketplace

Kampus.VC

Challenge 3

Digital Risk Protection Platform

Kampus.VC

Challenge 4

AI-Powered Student Analytics and Success Platform

KPMG in India

AI-Powered Student Analytics and Success Platform

Smart Campus Analytics: Predict, Optimize & Improve Student Success

Build an Analytics & AI-powered Student Success Platform that can identify students who may require intervention and help college administrators take data-driven actions.

Move beyond simply building a dashboard. Use analytics and AI to convert student data into actionable insights and decision intelligence.

FULL CHALLENGE BRIEF

Smart Campus Analytics: Predict, Optimize & Improve Student Success

1. Background

Colleges generate large amounts of data through attendance, internal assessments, examinations, LMS activity, placement participation, extracurricular activities, and student feedback. However, this data is often stored in disconnected systems and is rarely used proactively.

2. Challenge Statement

Build an **Analytics & AI-powered Student Success Platform** that can identify students who may require intervention and help college administrators take data-driven actions.

Move beyond simply building a dashboard. Use **analytics and AI to convert student data into actionable insights and decision intelligence.**

3. Core Scope

Data Integration

Bring student data from multiple sources into one unified student view, including:

- Academic
- Attendance
- LMS
- Engagement
- Placement
- Skills

Create a **Student Success Score** using relevant academic and engagement indicators.

At-Risk Identification

Identify students who may be at risk of:

- Poor academic performance
- Poor placement outcomes

Interactive Dashboard

Build an interactive dashboard for faculty and administrators showing:

- Student Success Scores
- Risk flags
- Key trends
- Relevant student insights

Suggested Data

Data Category	Examples
Academic	CGPA, marks, backlogs, subject performance
Attendance	Overall %, subject-wise attendance
LMS	Login frequency, assignment completion
Engagement	Events, clubs, hackathons, certifications
Placement	Aptitude score, coding score, mock interviews
Skills	Technical and soft-skill assessments
Feedback	Student satisfaction, faculty feedback

4. Bonus Features

Student Segmentation

Group students into meaningful segments, for example:

- High academic performance but low placement readiness
- Other segments that can support targeted interventions

Explainable Score

- Risk flag

5. Deliverables

- Working dashboard prototype built on the integrated student data.
- Short note explaining the **Student Success Score**, including the indicators used and how they are combined.
- Short demo or a few slides showing the approach and key insights.

6. Evaluation Criteria — 100 Points

Criterion	Weight	What Judges Look For
Data Integration & Analysis	30%	Quality of integration across sources, data cleaning, and insights drawn from the combined data
Success Score & Risk Identification	25%	Relevant indicators, sensible scoring logic, and clear identification of at-risk students
Dashboard & Visualization	25%	Interactive, clear, and useful for faculty and administrators
Problem Understanding	10%	Understanding of the campus context and the needs of faculty and administrators
Presentation & Demo	10%	Working prototype demonstrated clearly through a short demo or a few slides

7. Bonus Credit

Bonus credit may be earned for:

- **Student Segmentation:** Meaningful student groups that support targeted action.
- **Explainable Score:** Visible drivers behind each Success Score and risk flag.

Bonus credit is added within the relevant evaluation criteria:

- Segmentation → **Success Score & Risk Identification**
- Explainable Score → **Dashboard & Visualization**

Bonus credit is capped at approximately **5–10 points in total**.
