DEMO-001 | B.Tech Artificial Intelligence | Year 3 | Semester 5 | Batch 2024-2028

77

/ 100

SUCCESS SCORE

25%

REVIEW INDEX (1/4 checks)

REVIEW SUGGESTED

SYNTHETIC DEMO: illustrative rules, not validated predictions.

Summary

- Strengths: CGPA, Attendance, LMS assignment marks meet the configured review thresholds.
- Coding assessment 48/100 is below the demo review threshold 50/100.
- Next step: discuss the specific evidence with faculty and agree a focused improvement plan.

Indicator results

Indicator	Result	Against threshold	Review below	Weight	Status
CGPA	8.2 / 10		6 / 10	25%	ON TRACK
Attendance	89 / 100		75 / 100	25%	ON TRACK
LMS assignment marks	89 / 100		50 / 100	25%	ON TRACK
Coding assessment	48 / 100		50 / 100	25%	BELOW

Bars show each result against its maximum; the dark tick marks the review threshold. Missing evidence has no filled bar.

How the 77 is built

Each indicator is normalized to its maximum, multiplied by its configured weight, then added. No unverified evidence adds points.

Subject ledger - Semester 5

Subject	Semester	Marks	Attendance	Credits
Data Structures	5	82 / 100	Not recorded	Not recorded
Database Systems	5	78 / 100	Not recorded	Not recorded
AI & Machine Learning	5	86 / 100	Not recorded	Not recorded

Portfolio - self-reported

0

ACHIEVEMENTS

Unverified portfolio evidence does not add score points.

Other recorded evidence

Source	Recorded result
LMS activity	4 of 6 modules
Engagement	3 activities
Feedback	Not recorded

Method and limitations

Success score = sum of normalized indicators x configured weights. Review index = triggered checks / assessed checks x 100; it is not a failure probability. Demo rules are illustrative. No institution-approved policy means no real-account score.

CGPA: 25% weight; 20.50 contributing points.

Attendance: 25% weight; 22.25 contributing points.

LMS assignment marks: 25% weight; 22.25 contributing points.

Coding assessment: 25% weight; 12.00 contributing points.

Wording source: deterministic fallback. AI changes wording only. Every number comes from source records and code.
